

Netzgrafik-Editor

Netzgrafik-Editor is a fast and intuitive tool for long-term timetable planning across scheduled transport networks. It enables planners to create, edit and evaluate regular-interval timetables across different public transport modes.

Netzgrafik-Editor combines intuitive editing features with analytical capabilities for timetable planning:

- Graphical editor for creating timetable network diagrams and modifying lines and connections
- Flexible planning from initial rough sketches to increasingly detailed timetable concepts
- Regular-interval timetable planning for lines, connections and transport networks
- Train run editing for shaping connections, including symmetric and one-way train runs
- Origin-Destination Matrix for evaluating travel times between nodes across the network
- Timetable and network analysis to evaluate travel times, connections and the impact of timetable changes
