

Open Source Railway Designer

WORLD INNOVATION PREMIERE

OSRD is a digital twin for railway operations, supporting digital continuity from strategic planning to daily operations. Developed as a web application, it is composed of reusable building blocks for different use cases.

OSRD brings together connected capabilities for digital continuity across railway planning and operations:

- Infrastructure editor for the design phase
- Macroscopic timetable with hourly and daily patterns
- Microscopic simulation with conflict detection
- User-friendly interfaces with graphical interactions
- Non-calculation mode to build timetables with less data
- Rolling stock editor for precise results
- Automatic short-term path finding in the remaining capacity

Experience OSRD live at InnoTrans 2026:

Hall 7.1C, Booth 530
